

# TDT4305 2021 - Assignment 8

## Mining Social Network Graphs

1. Why do the hierarchical and point-assignment clustering methods from [MMDS] chapter 7 not work for clustering social graphs?
2. What is the definition of edge betweenness?
3. [MMDS] exercise 10.2.1. (a) and (b).
4. Given the answer to question 3 above, how would you proceed to find the final betweenness scores and a set of communities?
