Case study design

exploratory , longitudinal approach since the study is programme is done over a long duration of time

Data collection

Observations of meetings where different teams participate for cooperation, interviews, and document analysis

Interviews

Both qualitative and quantitative data using observations, interviews and documents and reports

Questionnaires and observations over a long period of time

Interviews of all team members trying to know both about coordination within and across teams.

Release documents of the three planned releases.

Observations on work progress, communication, and if team placement on the work area has an effect on this.
Questionnaire on the employees view on this.

Interview may be uncomfortable for employees, since they know eachother and may know eachoters opinions beforehand. May lead to false data.

Data analysis

Qualitative analysis

could be both qualitative and quantitative data analysis

Analyse how often the team members had meetings among themselves.

Analyse how often they conducted meetings with other teams.
