

Background

Well performed case study

A well-vetted group of research objects

Different types of data (interviews, field notes, documents, etc.)

- Follows the case study requirements: real-world context, etc.- Gathered data reflects relationships in the case environment.

well-performed: specific, well argued, trustworthy
poorly performed: not specific, not argued, biased

It should have an in-depth approach to the problem rather than a broad approach.

Interference from outside factors

The use of effective data-gathering methods

1. Researcher is a "ghost" looking in, but not interfering
2. Long time period
3. looking for correlations between phenomena

Few sources

Well performed case study

Researcher bias in data gathered

Poorly performed case study

Researchers interfere with the research objects

The chosen case study meshes badly with the RQ

Ineffective data gathering methods.
Data get's "lost"

The research objects are uncomfortable with the gathering methods

Knowledge from the case can not be generalized

Feedback on lecture

Good lecture

Very nice lecture!

Thank you for broadening my knowledge :)

Informative!

Very interesting and helpful lecture!

I learned more than I expected. I'd like some more time discussing in breakout room though.

Good stuff. unfortunately I could not participate too much in the breakout rooms

You are a good lecturer! Making this interesting and answering thoroughly
